# PIG CROP REPORT

JUNE 1957

Release:  
June 21, 1957  
12:00 Noon (E.D.T.)

The 1957 spring pig crop totaled 53,170,000 head, practically the same as the 1956 spring crop of 53,186,000 head, according to the Crop Reporting Board. The number of sows farrowed this spring at 7,466,000 head was 3 percent less than the 7,665,000 sows farrowed in the spring of 1956. The number of pigs saved per litter averaged 7.12, a new high for spring farrowing and compares with 6.94 pigs per litter in 1956. Reports on breeding intentions indicate a total of 5,308,000 sows to farrow this fall. This would be an increase of 2 percent over 1956 fall farrowings. If the intended farrowings are realized and the number of pigs saved per litter equals the average, plus an allowance for upward trend, the 1957 fall pig crop would be 37 million head. The combined spring and fall pig crops for 1957 would then be about 90 million head. This would be 1 percent above both 1956 and the 1946-55 average.

The number of hogs 6 months old and over on farms and ranches June 1 was 3 percent below a year earlier.

This report is based on a survey of 146,000 farm and ranch operators. These returns were obtained largely in cooperation with the Post Office Department through rural mail carriers.

## UNITED STATES

1/ As indicated by breeding intentions reports.

2/ Average number of pigs per litter with allowance for trend used to compute indicated number of fall pigs. Number rounded to nearest 500,000 head.

U. S. Department of Agriculture  
Washington, D. C.

Agricultural Marketing Service  
Crop Reporting Board

SPRING PIG CROP: The number of pigs saved in the spring season of 1957 (December 1956 through May 1957) is estimated at 53,170,000 head. This is only slightly below the 1956 spring crop of 53,186,000 head, but is 2 percent below the 1946-55 average.

The East North Central and the South Atlantic were the only regions showing an increase from 1956 in spring pigs. All other regions were down, ranging from a 9 percent cut in the North Atlantic to a 1 percent decline in the West North Central. By regions, the 1957 spring pig crop as a percent of 1956 is as follows: North Atlantic, 91 percent; East North Central, 102; West North Central, 99; South Atlantic, 102; South Central, 97; and West, 97.

The number of sows farrowed in the spring of 1957 is estimated at 7,466,000 head, 3 percent less than last year and 10 percent less than the 10-year average. The 1957 spring farrowings were 1 percent less than indicated by farmers' reports on intentions last December. The decrease in sows farrowed from the December intentions was widespread, with only the East North Central region farrowing more than was intended. The percentages, by regions, that the 1957 spring farrowings were of 1956 as now estimated and the spring intentions as reported last December are as follows: North Atlantic, 87 percent now and 88 percent last December; East North Central, 99 and 98; West North Central, 97 and 99; South Atlantic, 100 and 101; South Central, 95 and 97; and West, 93 and 96.

The 7.12 pigs saved per litter this spring compares with 6.94 in 1956 which was the previous high for the spring crop. The increase in average litter size was general, with all regions showing an increase. This is the seventh straight year of increase in the average pigs per litter for the spring pig crop and the current litter size is 13 percent above the 6.31 for 1950. Over the 7-year (1950-57) period, the upturn in production efficiency per sow farrowed has averaged about 2 percent per year. Weather conditions were not particularly favorable this spring since temperatures have been relatively cool and there were a number of late storms.

There was no significant change from 1956 in the monthly distribution of spring farrowings. The 1957 proportion of total spring sows farrowed during the December through February quarter at 33.2 percent is the same as last year. The number of sows farrowing each month during the 1957 spring season and the percent change from the same month a year earlier are as follows: December 1956, 398,000 sows, no change; January 1957, 726,000 sows, no change; February, 1,361,000, down 4 percent; March, 2,060,000, down 4 percent; April, 1,878,000, down 2 percent; and May, 1,043,000, no change.

FALL 1957 INTENTIONS: Reports on breeding intentions indicate that 5,308,000 sows will farrow during the fall season (June through November) of 1957. If these intentions are realized

the number of sows farrowing this fall would be 2 percent more than during the fall of 1956 and also 2 percent more than the 10-year average. Compared with last year, all regions except the North Atlantic and South Central showed increases in the number of sows intended for fall farrowing. The rate of increase is the greatest in the West, up 4 percent; followed by the West North Central and East North Central, both up 3 percent; and the South Atlantic, up 2 percent. The North Atlantic region showed a decline of 12 percent while the South Central was down 4 percent.

These estimated changes from last year are based on breeding intentions reported by farmers about June 1.

If fall farrowing intentions materialize and the number of pigs saved per litter equals the average, with an allowance for upward trend, the 1957 fall pig crop will be about 37 million head. This would be 1 percent above 1956 and 7 percent more than the 10-year average. The combined pig crops for 1957 would be about 90 million head, 1 percent above both last year and average.

HOGS OVER 6 MONTHS OLD ON FARMS JUNE 1: The number of hogs over 6 months old (including sows) on farms June 1 this year was 15,159,000 head compared with 15,588,000 on June last year, a decrease of 3 percent. The 1957 number was 25 percent below the 10-year average. The 1956 fall pig crop, which makes up most of the June 1 inventory of hogs over 6 months old was 4 percent smaller than in 1955. Total commercial hog slaughter from January through April 1957 was 13 percent below a year earlier, while Federally inspected hog slaughter in May was approximately the same as in 1956. Sows held for fall farrowing represent a larger proportion of the June 1 inventory of hogs over 6 months than last year.

SELECTED CORN BELT STATES: The 46,448,000 hogs and pigs on farms June 1, 1957 for 9 Corn Belt States was 1 percent above last year but 8 percent below the same date for 1955. These 9 States are Ohio, Indiana, Illinois, Wisconsin, Minnesota, Iowa, Missouri, South Dakota, and Kansas.

Hogs and pigs six months old and over at 9,103,000 head were up 1 percent from June 1 last year. The number under six months of age was also 1 percent above last June, with an increase of 2 percent in the 3-6 months age group, and a 1 percent increase in the number of pigs under 3 months old. The 1 percent increase in pigs under 6 months old compares with a decline of 2 percent in the number of sows farrowing during the spring season (December 1956 through May 1957) and reflects the record number of pigs saved per litter.

The 26,625,000 pigs under 3 months old on farms June 1, 1957 were 57.3 percent of all hogs as compared with 26,448,000 pigs under 3 months old and 57.5 percent of the total on June 1 last year. Pigs 3-6 months of age totaled 10,720,000 head this year--up 2 percent from the 10,512,000 head on farms June 1, 1956.

The intended number of sows for 1957 fall farrow in the 9 Corn Belt States, at 3,646,000 head, is up 3 percent from 1956. Since breeding stock is included in inventories, the supply of hogs available for marketing this summer is not much different from 1956.

Present intentions indicate that the major proportion of the 3 percent increase in 1957 fall farrowings will take place in the summer quarter of June through August with the fall quarter of September through November showing only a 1 percent increase. Sows expected to farrow during June, July and August at 1,932,000 head, are up 4 percent from the 1,851,000 head for 1956. The current June survey shows a 1 percent increase over the early intentions of 1,912,000 head reported on March 1, 1957. The 1,714,000 sows intended for farrowing in September, October, and November of 1957 for these 9 States are 1 percent, or 25,000 head above the 1,689,000 sows farrowed in these same months of 1956.

The 9 States covered in this supplementary report accounted for 69 percent of the 1956 fall pig crop and 71 percent of the 1957 spring pig crop.

The additional data on inventories and the seasonal distribution of farrowing intentions for the 9 States are made possible by matching funds provided jointly by State agencies and the United States Department of Agriculture under provisions of the Agricultural Marketing Act of 1946.
